R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
getwd()

## [1] "/Users/deepaksirwani/Desktop/quarto-test/analysis"

# setwd()
# write_csv(cars, "cars.csv")

# cars2 <- read_csv("cars.csv")
# cars2
```

Including Plots

You can also embed plots, for example:

```
# install.packages("here")
library(here)

## here() starts at /Users/deepaksirwani/Desktop/quarto-test
hello <- here("cars.csv")

hello

## [1] "/Users/deepaksirwani/Desktop/quarto-test/cars.csv"
read_csv(hello)

## Rows: 50 Columns: 2
## -- Column specification -----
## Delimiter: ","
## dbf (2): speed, dist
##
## i Use `spec()` to retrieve the full column specification for this data.
## i Specify the column types or set `show_col_types = FALSE` to quiet this message.

## # A tibble: 50 x 2
##   speed dist
##   <dbl> <dbl>
## 1     4     2
## 2     4    10
## 3     7     4
```

```
## 4      7    22
## 5      8    16
## 6      9    10
## 7     10    18
## 8     10    26
## 9     10    34
## 10     11    17
## # i 40 more rows
```

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
